Final mark: 0

Task	Criteria	Marks	Points awarded	Marks justification (if any)	Feedback (if any)
	PART A (40 marks)	40			
1	**Main, welcome message and array declaration and initialisation** 0: Not implemented or student used dynamic arrays (ArrayList, dictionaries..) 1-2: The declaration of the arrays is not correct (e.g., wrong number of rows or seats) and /or welcome message missing 3: The declaration itself is OK but it is not declared in the correct place 4: Excellent declaration of arrays and welcome message shown	4			
2	**Menu** 0: Not implemented 1-2: Menu does not repeat and does not exit correctly or does not contain input validation 3-4: Menu does not repeat or does not exit correctly 5-7: Menu works correctly but the use of control structures is poor or not adequate 8: Menu correctly implemented and ends correctly	8			
3	**Method 'buy_ticket'** 0: Not implemented 1-2: It does not record the seat as sold 3-4: Either no input validation or does not check if the seat is available 5-6: Good input validation (data type and range), checks if the seat is available, and works correctly	6			
4	**Method 'cancel_ticket'** 0: Not implemented 1-2: It does not record the seat as available 3-4: Either no input validation or does not check if the seat is already available 5-6: Good input validation (data type and range), checks if the seat was sold, and works correctly	6			
5	**Method 'print_seating_area'** 0: Not implemented 1-4: There is an attempt but the output does not show the correct seats available or sold 5-7: Works correctly but the format is incorrect. 8: Works correctly and the format is correct.	8			
6	**Method 'find_first_available'** 0: Not implemented 1-2: There is an attempt but does not work correctly or has major issues 3-4: There is an attempt, but has some minor issues or does not find the correct seat. 5-6: Works correctly but is not efficient or wrong choice of control structures / loops 7-8: Works correcty and is an efficient implementation with the correct structures and loop	8			
	PART B (38 marks)	45			
7	**Class Person** 0: Not implemented 1-3: Attributes are not defined correctly or getters or setters missing or constructor missing 4: Attributes defined correctly, all getters and setters and constructor	4			
8	**Class Ticket** 0: Not implemented 1-3: Attributes are not defined correctly or getters or setters missing or constructor missing 4: Attributes defined correctly, all getters and setters and constructor	4			
9	**Buy/Cancel seats update** 0: Not implemented 1-2: Student used dynamic arrays (ArrayList, dictionaries..) or class Ticket or class Person are not used 3-4: Either buy_seat or cancel_seat has not been updated or is not working correctly 5-7: There is an attempt in implementing both, but either one of them or both have minor issues. 8-9: Objects are created correctly, but the array management is not efficient/correct 10: Implementation works and uses standard arrays efficiently	10			
10	**Method 'print_tickets_info'** 0: Not implemented 1-4: Either the loop is not correct or does not use methods in class Ticket or class Person correctly 5-8: 9-11: Works, but the total price is not calculated or not correct 12: Use of the correct loop, correct use of class Ticket and class Person, total price is correct	9			
11	**Method 'search_ticket'** 0: Not implemented 1-2: There is an attempt, but does not work correctly or uses dynamic arrays 3-4: Works, but the student did not use a search algorithm 5-6: Works and efficient use of a search strategy	9			
12	**Method 'sort_tickets'** 0: Not implemented 1-2: There is an attempt, but does not work correctly or uses dynamic arrays 3-4: Works, but the student did not use a sorting algorithm 5-6: Works and efficient use of a sorting strategy	9			
	TESTING, SELF-EVALUATION AND STYLE	15			
	Tests part A 0: No testing 1-3: Some testing done but most cases/methods are missing 4: Most/all cases/methods tested	4			
	Tests part B 0: No testing 1-3: Some testing done but most cases/methods are missing 4: Most/all cases/methods tested	4			
	Style: 0: No use of comments, no informative variable names, no formatting, no use of self-defined methods 1: Some comments, some variable names, some formatting, some use of self-defined methods 2: Excellent use of comments, names, formatting, and excellent use of self-defined methods	2			
	Self-evaluation form completed	5			
	DEMO				
	Student needs to attend a demo	yes/no			Not attending to the demo will results in 0 marks
DEMO					
	TOTAL	100	0		

Feedforward	Content the student needs to revise (add 'X' to the corresponding ones)	
Constructive comments for the student to bring 'forward' their learning:		Week 1: Input and output
		Week 2: Data types, operators, if conditions
		Week 3: Loops, input validation
		Week 4: Arrays, search and sort
		Week 5: Methods
		Week 7: Classes and objects
		Week 8: Files and testing
		Other:
