# **Section B** (5 May 2017)

You have been asked to create the Web Page displayed in Appendix A. The corresponding HTML code is displayed in Appendix B, and you just need to fill-in the gaps numbered from 1 to 23. Write your answers on your answer book.

Please note:

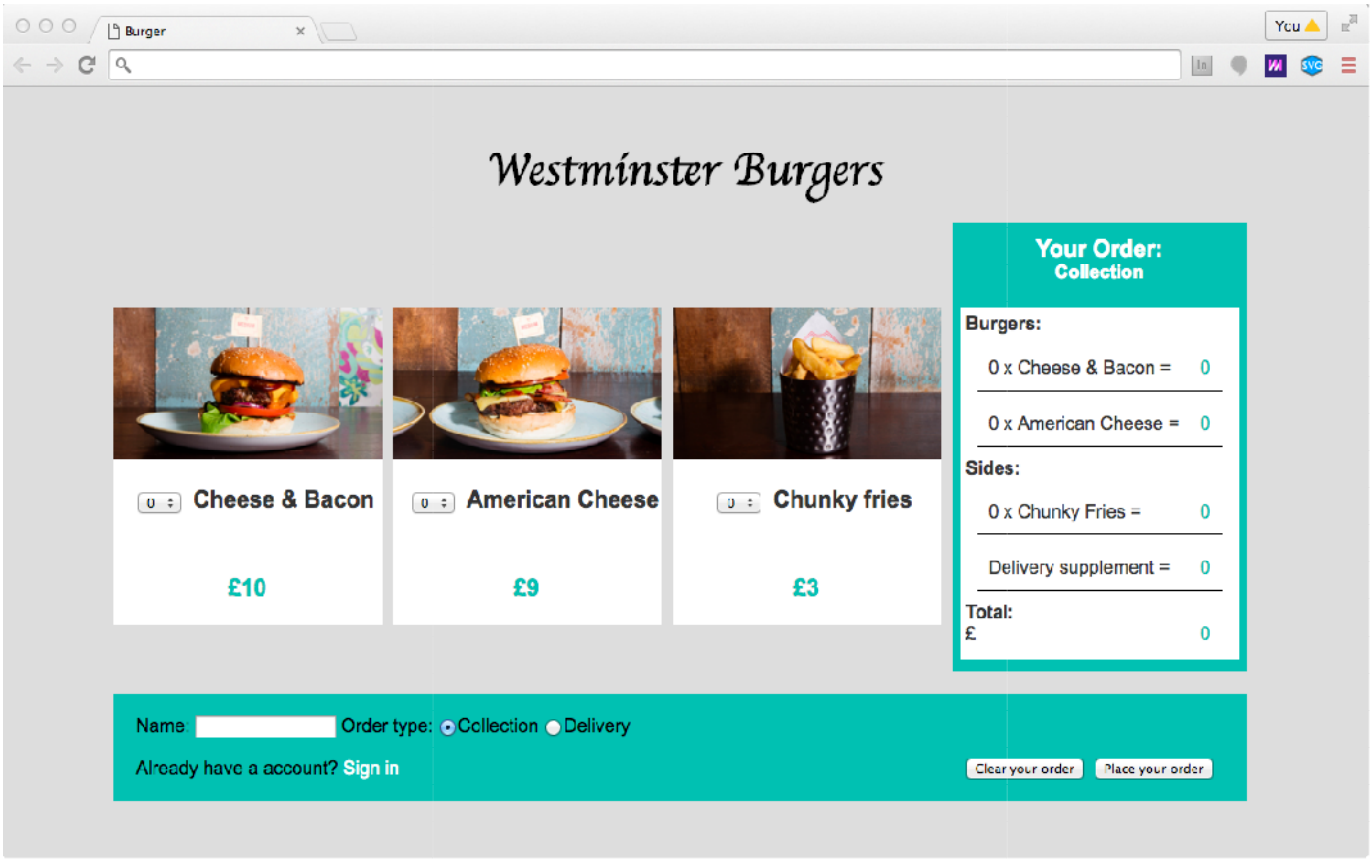

- Level 1 heading will be displayed using the font 'pacifico', or cursive, the colour code #000, and font size 40. The text will also be aligned in the center
- 'Westminster Burgers' is a level 1 heading,
- The Web page for 'sign in' is signin.html,
- The menu items for the Westminster Burgers are:
  - Bacon Burger:
    - Image File: bacon.jpg
    - £10
    - alternative text is 'picture of a bacon burger'
  - American Cheese Burger:
    - Image file: cheese.jpg
    - £9
    - alternative text is 'picture of a cheese burger'
  - Chunky Fries:
    - Image file: fries.jpg
    - £3
    - alternative text is 'picture of chunky fries'
  - Choosing 'Delivery' adds £2 to the bill, if the food cost is below £12. The Delivery is free on orders equal to or above £12.

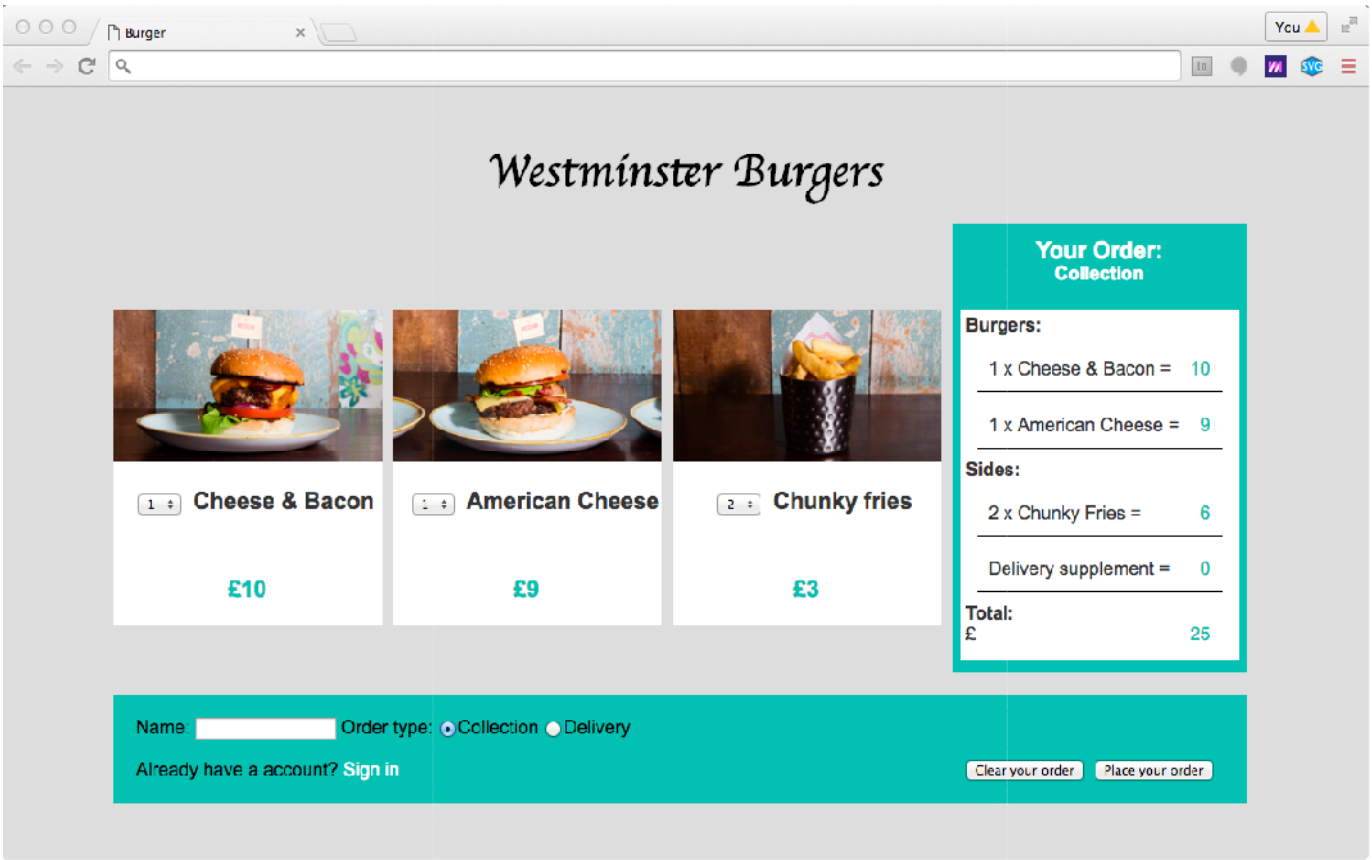

The order is updated via the updateOrder() function when the order type (Collection or Delivery), is changed, when any of the chosen item quantities (0 to 3 for each item) is changed, or when the form is reset.

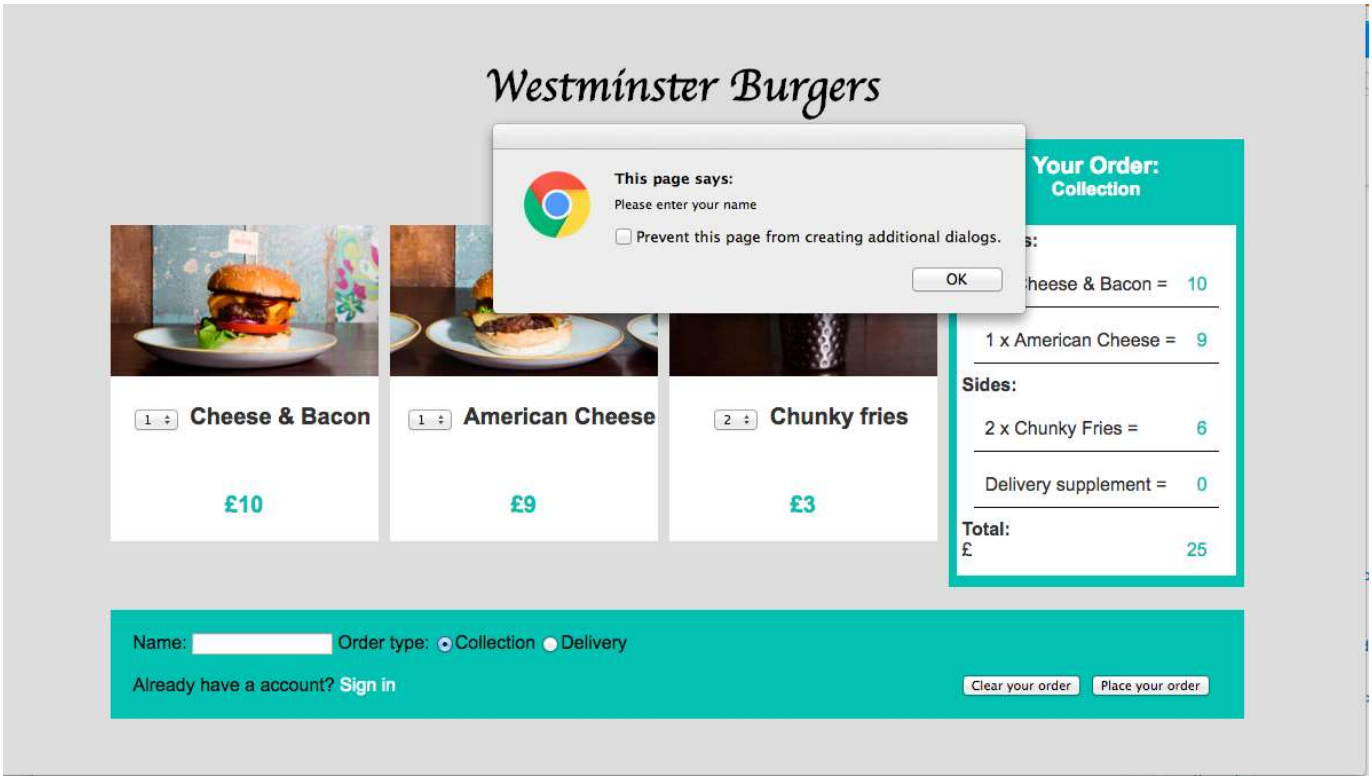

The updateOrder() function displays the order type above the order details, just below "Your order:" and the order price is calculated and displayed, together with the delivery charge if needed.

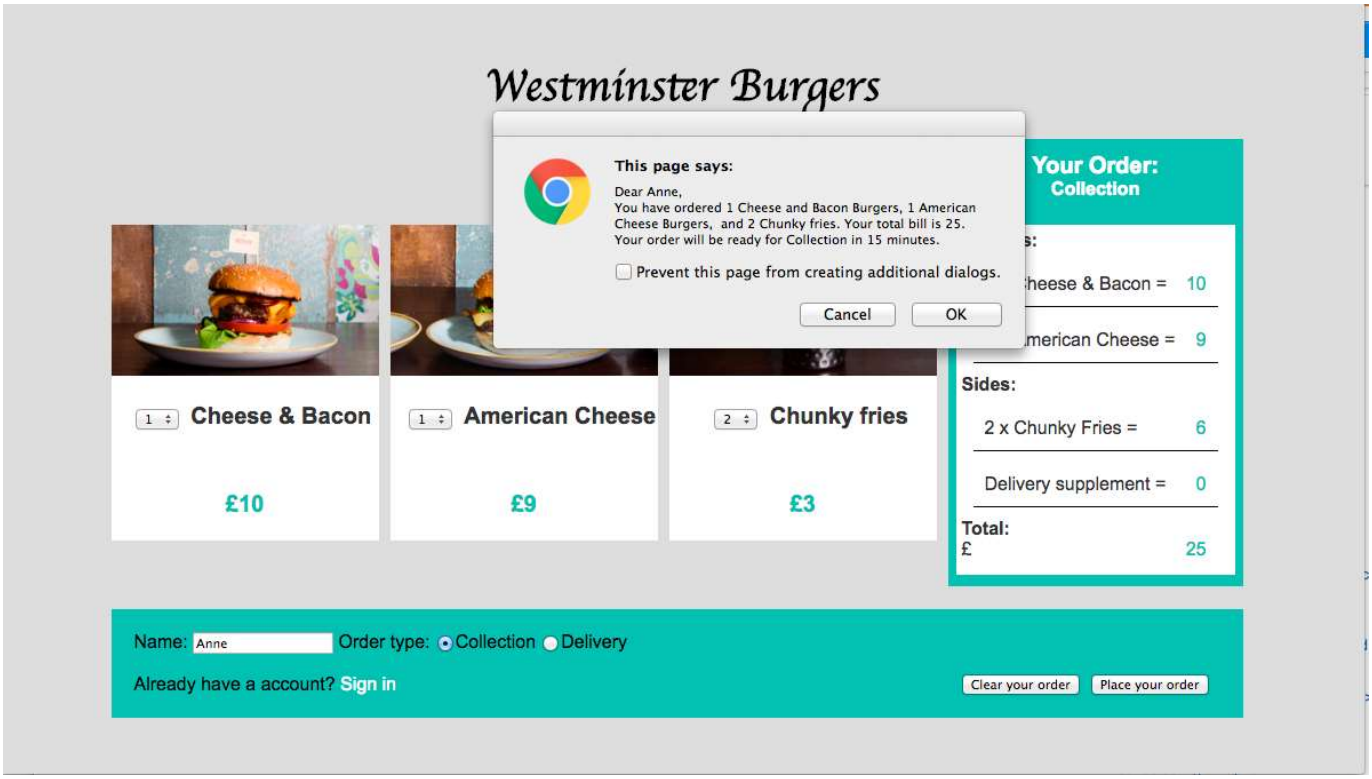

When the place order button is pressed, the placeOrder function is called. This calls the updateOrder function (see description above). The function then checks whether a name has been entered and will provide a popup message if this is missing. If the name is present, the function will display a popup with a summary of the order.
